### General Description

The AW17445 is a single-pole, four-throw (SP4T) antenna tuning switch, using CMOS silicon-on-insulator (SOI) process. The high voltage handling, high linear performance and low  $R_{on}$  and  $C_{off}$  make the switch very suitable for high performance antenna tuning application.

The AW17445 is provided very small FCQFN 1.5mm x 1.1mm x 0.37mm-10L package.

## Timing Diagram (Power ON and OFF sequence)

It is very important that the user adheres to the correct power-on/off sequence in order to avoid damaging the device. The control signal V1 should be set to 0V unless VDD is set in the operating voltage range.

Power ON:

- 1) Apply voltage supply --- VDD
- 2) Set Controls---V1/V2/V3
- 3) Wait at least 20 $\mu$ s and then apply RF input

Change switch position from one RF port to another:

- 1) Remove RF input
- 2) Change control voltages V1/V2/V3 to set the switch to desired RF port
- 3) Wait at least 20 $\mu$ s and then apply RF input

Power OFF:

- 1) Remove RF input
- 2) Remove control voltages---V1/V2/V3
- 3) Remove VDD input
